Research Overview

Scholarship activity allows residents to acquire skills that will be useful throughout their medical careers.

[PGY-1](#) residents have a required two-week core research rotation. For those who want to continue a project beyond the first year a research option is now available in all three general pathways of internal medicine: Subspecialty, Hospital Medicine, and Ambulatory Medicine.

This research option allows extra time for research started in the first year: four weeks in [PGY-2](#) and four to eight weeks in [PGY-3](#). Residents who satisfy the research option requirements will graduate with the designation "Distinction in Research."

Residents can also schedule two-week research blocks in PGY-2 and PGY-3, this however does not fulfill the requirements of the research option.

This web page is designed to inform residents about the PGY-1 core rotation and the research option. If you have any questions, contact [Dr. John Grable](#) at (585) 275-5710 or by pager (16-1198).

For PGY-1 Residents

Step 1. View [PGY-1 Research Rotation](#) for notes on the first-year core research rotation and a look at suggestions and expectations.

Step 2. See [Projects and Mentors](#) for help selecting a project, finding a mentor, doing clinical research, and investigating global health topics and library resources. Includes a list of volunteer mentors, their medical specialties, and their research interests.

Step 3. See [Research Proposal](#) for guidance on research proposals, case reports, abstracts, clinical review articles, posters, and other ways to present your work.

For PGY-2/3 Residents

Click on [PGY-2/3 Research Rotation](#) for rotation goals and expectations, including a discussion of time commitments.
